LISCLARE

OVERHEAD HOIST, ROOM TO ROOM – THE EASY WAY

Lisclare Limited will be demonstrating its innovative approach to patient handling. The problem of room to room transfer is solved with the Roomer. The Roomer cassette is suspended from two belts, both of which are connected when moving from one room to another. This makes the transfer horizontal in a smooth and controlled movement with no height loss. No modifications are required to door frames or walls because the lift moves from one rail to another, making transfers easy for beginners. It is also a cost effective option because the cassettes are fully portable- there is no need to buy one for every room you track!
