Benmor Medical

The Benmor Aurum Range Offers Total Flexibility whilst Supporting Bariatric Care

Abstract

Aurum Expandable Bed - The Aurum bariatric bed has been designed specifically for size and strength. The width adjustment feature allows the bed to be used alongside standard beds during everyday use but can be expanded quickly and simply to accommodate bariatric patients. The width adjustment also enables the bed to be transported as a standard sized bed therefore will fit through doors.

The four section, fully profiling mattress platform is powered by electric actuators which enable the bed to cope with patients up to 65st/414kg.

The integral scale unit enables staff and carers to carry out accurate patient weighs up to 65st/414kg.

The Aurum Riser/Recliner Chair has been specifically designed to address some of the problems associated with hospital usage with regards to manoeuvrability and mobile hoist use. The chair is mounted on four heavy duty castors with rear brakes for transportation and stability. Space around and underneath the chair and the lifting mechanism accommodates mobile hoists for easier patient transfers.

Bespoke seat width, depth and height means chairs can be tailored for individual patients needs or kept standard for general use while the dual motor means the functions of the chair can be operated individually to maximise patient comfort and support.

Can be manufactured to accommodate patients up to 40st/254kg or 50st/318kg.

The Aurum Commode design is based on our standard bariatric commode but has been updated to meet recent high infection control standards. It has a removable seat which gives access to the frame work of the commode for more effective cleaning.

The commode has four braked castors to ensure stability when in use and a large space at the rear to accommodate larger patients.

The commode has a safe working load of 53st/337kg

Attendees will have the opportunity to try all functions of the equipment in the Aurum Range with Benmor staff on hand to answer any questions.
